

Simple and Convenient Option Trading

Trade, Buy and sell uncontrolled options to make profit; fixed price and unlimited upward option contracts;
No registration, KYC or email required.

► Platform Introduction

Defx is a decentralized uncontrolled options trading platform and prediction market. The functions of Defx are implemented by smart contracts in BSC (Binance Smart Chain), TRON, and Polygon. The code source is open and cannot be tampered. It can ensure the security of user assets and the fairness of the rules. At present, Defx has provided safe and reliable option forecasting market services for nearly one million users in many countries around the world.

► Project Benefits

Option trading in centralized exchanges is opaque, price manipulation and misappropriation of user assets

Defx adopts a decentralized approach to build a trading platform, and all businesses are realized through smart contracts. Due to the openness, non tamperability and traceability of blockchain, the security of user assets and the openness of transactions are ensured.

Provide an investment channel with high security and low entry threshold

DEFX is based on decentralized smart contracts. Users can participate in transactions as long as they have digital assets. There is no need for complex account opening and authentication processes, which can greatly reduce the entry threshold of users and a potential misuse of Users Informations and datas.

Provide short-term speculative trading varieties for users with high risk preference

Defx provides short-term option trading varieties, which are divided into 5 minutes, 15 minutes and 30 minutes. It provides a good investment target for users with high risk preference.

► Project Benefits

The DEFX platform will be deployed on multiple public chains, including **BSC**, **Tron**, **Polygon**, and **Arbitrum**. The token issuance ratio of each public chain is as follows:

30%

20%

30%

20%

The establishment of compliance service teams for Singapore, Japan, South Korea, Malaysia, Hong Kong and other countries and regions has been completed.

► Product function / Option market forecast trading

Trading with unmanaged options to make a profit; Fixed price and unlimited option contracts.

Holder

Trade call and put options on WBTC and ETH. uncontrolled options are reconciled with chains. Select any price and trade at any time.

Period

At least 5 minutes to at most 1 day, option trading is bullish and bearish. Double the profit from the handicap, with a prize pool of tens of millions of dollars.

► Product Features - Membership Casting

Users can forge one DFV by pledging 100 DFTs. DFV is not only the membership certificate of the platform, but also the value capture tool of the platform. Holding DFV can enjoy the following interests:

- **Dividends:** 20% commission dividend on options, forecasting and NFT markets.
- **Membership awards:** A total of 10% of DFT was distributed to DFV holders within 2 years.
- **NFT Airdrop:** The platform will air-drop NFT lottery tickets, partner limited edition NFT and so on periodically.
- **Invitation rebate:** Holding at least one DFV can invite new users and receive a 30% rebate on new user transaction fees.
- **More future interests**

► Market Situation

1. The so-called centralized 3C problem exists in the central forecasting market: Closed, controlled, and costly. These factors limit the ability to predict market effectiveness, information collection and accurate forecasting.
2. The lower upper limit of the betting set by the central forecasting market prevents participants from fully expressing their beliefs and driving the market through larger bets. This limits the market's predictive power. The risk of a market being shut down by regulation is also detrimental to participation.
3. The centralized forecasting market collects fees in the form of profit decimation or cash contribution. This would limit participation, and a reduction in participation would be detrimental to effective prediction. Spot exchanges and precious metals are prohibited in China, and users cannot find any trading varieties.
4. prices are manipulated and a large number of investors are left;
5. The State Encourages the Development of Blockchain Industry

► Platform advantages

Options and Defx	Target Users	Win or Lose	Basic Arithmetic
Traditional Option	Early Futures Users	None	Low currency, complex interface operation, high cost
DeFx	Users with global digital assets	NFT rewards	Rich currency, simple interface operation, low cost

► Product Advantages

These favorable factors have prompted the rise of decentralized prediction markets. DEFX is built on BSC and TRON, and has made three key changes to the traditional decentralized prediction market model:

- **Stable currency pricing:** DEFX denominates all its markets in USDT to avoid the inconvenience caused by price fluctuations.
- **Liquidity incentives:** DEFX charges a 2% fee for each transaction directly transferred to the liquidity provider.
- **Focus on simplifying the user experience:** In most parameters, DEFX's user experience is more intuitive than most competitors.

Become a partner

- Become a partner if settled in 10,000 DFT
- Partners invite friends to get 70% of the lottery rewards deducted from the trading fees of the friends
- Partners can set the rebate ratio of friends
- Partner's direct friends can invite users

► Token issuance and distribution

The total circulation of DFT is 1 billion, of which:

DFT

- 5% used to provide initial liquidity.
- 15% used for liquidity mining.
- 15% used for private equity and early supporters.
- 15% used for the oracle verifier reward.

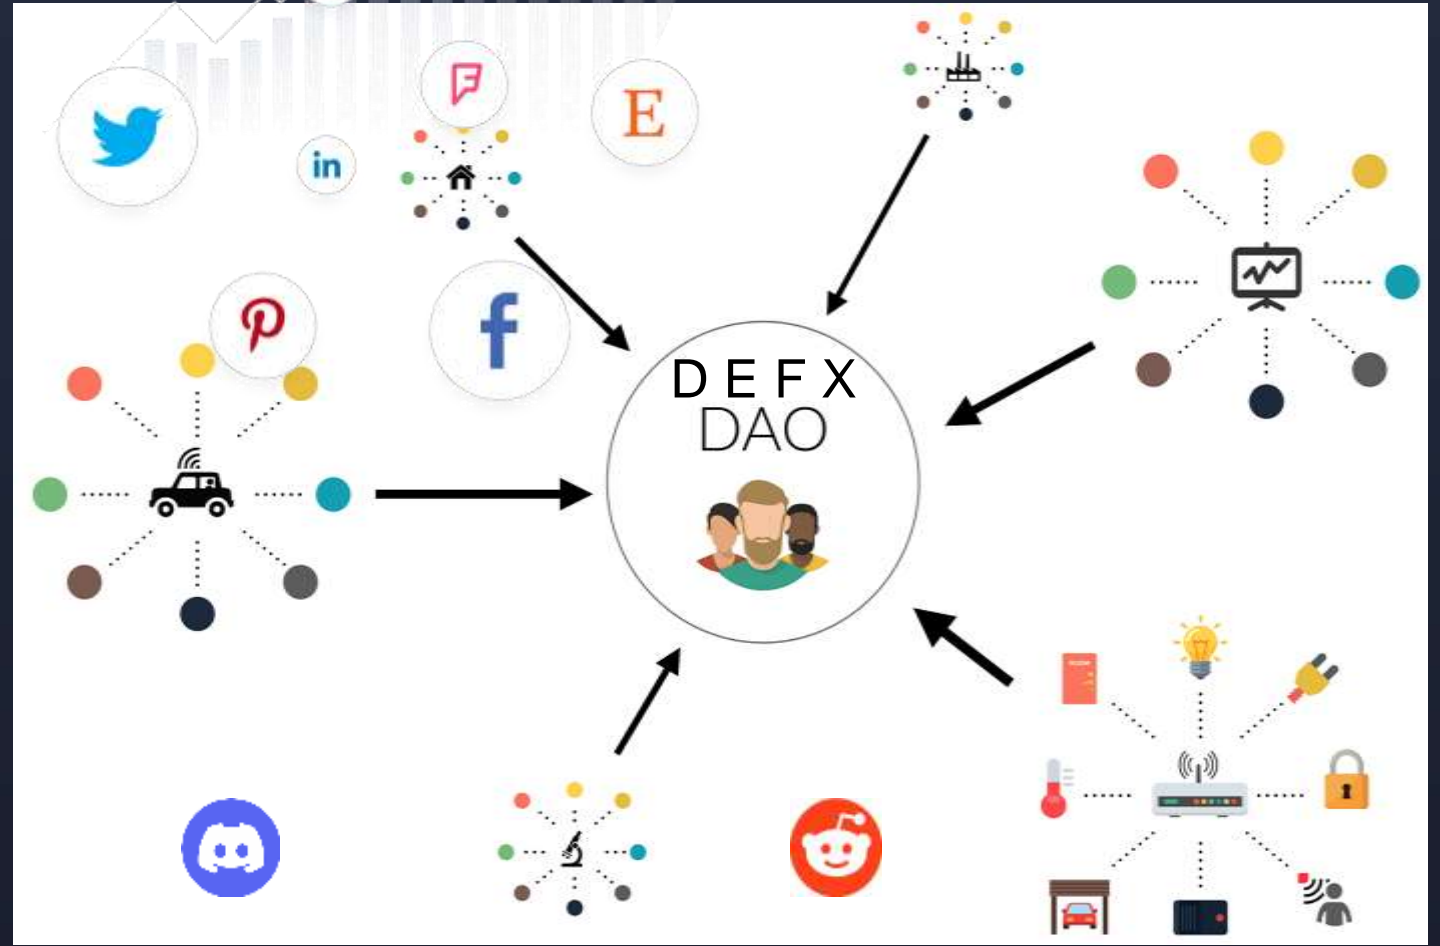

DFV

- 10% used for member rewards.
- 10% used for marketing such as airdrops.
- 15% used for the team and consultants.
- 15% held by DEFX Foundation

► DAO

We Govern Better, Together.

we want to focus on getting stuff done, instead of endless unnecessary voting, that's Why Defx Governance is operated by its DAO through the ownership of its token. Defi DAOs operate using smart contracts, which are essentially chunks of code that automatically execute whenever the set of criteria are met. Defx DAO is fully autonomous and transparent As they are built on open-source blockchains, anyone can view their code. Anyone can also audit their built-in treasuries, as the blockchain records all financial transactions. Defx various communities, [Twitter](#), [Telegram](#), [Facebook](#), [Discord](#), [Reddit](#), [Instagram](#), are the main lungs of its DAO

► Team Member

As DEFI stands for Decentralization, the Defx team is pretty decentralized through its dispatch all across the world, from Asia to America. All united by the same goal and passion for 3 years now, blockchain tech, Crypto-World and DEFI innovation. The main team includes Hackers, Financial Experts, blockchain Developer, Defi and Dapp developers, NFT & Tokenomic modeling Advisor, digital Marketing Advisor and few beginners. This core team has been engaged in the financial industry for more than 10 years, has been working together for more than 3 years, has jointly developed more than 3 products, and has accumulated more than 200,000 users, and has accumulated a turnover of more than 300 million US dollars.
